

Performs more tests with no adjustments than any other IC or discrete op amp tester

Philbrick/Nexus Model 5102 Integrated Circuit Tester performs all tests automatically without calibration or manual programming. The only time you touch a dial is to select the desired test and for a minimum of scale changing for offset voltage and current measurements. Everything else is automatic, including offset zeroing. What's more, it is the only tester that performs CMRR and PSRR tests.

For only \$1200 you get all these additional features in a single instrument: direct reading meter displaying values of all parameters including large signal DC gain, external terminals for displaying IC output, selection of output resistors to match load, oscillation indicator, internal supply of ± 15 VDC programmable for ± 6 VDC — plus many more features. Contact your Philbrick/Nexus sales representative for complete details and specifications. Or write Philbrick/Nexus Research, 35 Allied Drive at Route 128, Dedham, Mass. 02026.
